
The DMT Code Symbol Registry: Reported Visual Forms in Altered and Baseline States

Volume 1. N,N-DMT and the 650 nm laser protocol

Version 1.0
2026-08-25

DOI: 10.5281/zenodo.22101522

Licensed CC BY 4.0

51 public records. 2 confirmations recorded across them.
These are reported observations, not verified phenomena.

WHAT THIS IS

The symbols in this document are compiled from descriptions and drawings submitted by contributors to dmtcode.com. They are reported observations, not measurements. Nothing collected here has been verified, replicated under controlled conditions, or established as a phenomenon. A drawing appears in this record because a person said they saw a form and drew it as they remembered it, so publication here is a record of a claim rather than a confirmation of it. Entries marked as seed illustrations were drawn for the registry and are not themselves submissions. The corpus is small and early. It is published in this form so that the raw material can be read, cited, and disputed by anyone, and so that later editions can be compared against it.

ATTRIBUTION

First reported by Danny Goler. He made the observation in August 2020. The written protocol grew out of it.

He has no part in the store, the site, and is not a founder or an editor.

He has not reviewed or approved any kit, page, or claim, and endorses nothing.

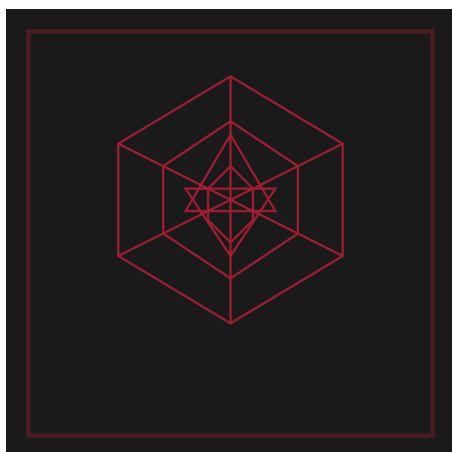

Pilot study: IPI Letters 3(1) N1 to N5. DOI 10.59973/ipil.158. Licensed CC BY 4.0.

HOW TO READ AN ENTRY

Each entry carries the drawing as submitted, the record identifier in short form with the full identifier printed beneath it so the record can be cited exactly, the contributor handle, the contributor description where one was given, any of the optional fields the contributor filled in, and the confirmation count held for that record. Contributors are identified by the handle they chose and by nothing else. Most optional fields were left blank and are simply absent from the entry. A record with no confirmations is printed as 0 confirmations rather than left blank. Entries are ordered by confirmation count and then by the date the record was created.

I know it sounds nuts. But so did staring into a neat infrared laser so
I mean.... Is it so strange? I think artifacts in camera digital light
condensing is showing something we hardly perceive due to large
ethereal transparent attributes. I think the artifacts are condensing a
solid form or op code not just light photon to pixel coincidence.
Why do I see the same shapes in all light then hmmm???

METHODOLOGY

Records reach this registry through the /submit-symbol flow on dmtcode.com. A contributor draws the form on a canvas in the browser or uploads an image of a drawing, and may add a written description together with four optional fields: source method, surface type, symmetry, and wavelength. All four are optional and most were left blank, which is why the entries carry uneven detail. Nothing is edited for content.

The 21 seed illustrations in this volume were drawn for the registry by Fractal-Feather (Admin) over an extended period of research. They were worked up from personally collected handwritten first-hand accounts rather than from a single sitting or a single source. They are illustrations of reported forms, not submissions, and they are labelled as such on every entry in which they appear.

A confirmation is one other person marking a record to say they saw the same form. It is a second self-report, not an independent measurement, and it carries no check on whether the two people saw anything alike beyond their own assertion. Anonymous confirmation went live on 2026-08-24. Any confirmation recorded before that date was cast during a period when only signed-in accounts could confirm, so counts from before and after that date are not comparable and should not be read as a trend.

This edition contains 51 records, of which 21 are seed illustrations and 30 are contributor submissions, drawn from 11 contributors in total. The records span 2025-11-30 to 2026-08-24. Across all 51 records there are 2 confirmations in total. The remaining 49 records carry 0 confirmations. Most records are photographs or uploaded drawings; only a small number were submitted as vector artwork.

Of the 2 confirmations held across all 51 records, 1 is recorded against a seed illustration rather than against a contributor submission. Record 496025a2-1735-42d0-8069-b1b86c2b10df is a seed illustration and holds one of them. Record 8f9a393e-a24c-4782-b429-be6b64886fc8 is a contributor upload and holds the other. Exactly 1 contributor-submitted symbol has been confirmed by a second person to date. No rate, ratio, or percentage should be computed from this edition. The counts are printed so that a later edition can be compared against them, not so that conclusions can be drawn from them now.

LICENSING AND REMOVAL

Contribution to this registry constitutes consent to publication under CC BY 4.0. The registry exists so that reports accumulate in an inspectable, citable form, and a record that cannot be republished serves no one. Every public record is therefore included in this edition.

A historical note, stated because it is discoverable in the public data: the submission form previously carried an optional consent checkbox. It was unchecked by default, it was not required, and it sat under a heading about who can see a record rather than about licensing. Most contributors did not check it. It did not reflect registry policy and has been replaced by a plain statement of the licence at the point of submission. The publication_consent field is retained in the data as a historical record of that form and is not used to gate publication.

Any contributor may request removal by contacting info@dmtdcode.com. Removal will be actioned on the live registry.

One limitation is stated here plainly. A Zenodo record, once published, is permanent. It can be withdrawn from public view and replaced by a tombstone, but the deposit and the DOI persist, and a CC BY licence already granted cannot be revoked for copies already made. A contributor who wants their record removed from a published edition will have it removed from the live registry and from all subsequent editions.

CONTRIBUTORS

Contributors are identified by the handle they chose. No real names or account identifiers appear in this document.

Handle	Records in this edition
Fractal-Feather (Admin)	21
Anonymous contributor	18
Lunar-Sable	3
Slate-Fern	2
Cobalt-Grove	1
Crimson-Sparrow	1
Ivory-Harbor	1
Lucid-Comet	1
Mica-Harbor	1
Slate-Petal	1
Slate-Sparrow	1
Total	51

11 contributors are represented in this edition. Records whose contributor had no handle set are listed as Anonymous contributor.

HOW TO CITE

SAFETY

This document is a record of reported imagery and contains no dosing information and no sourcing information. It is not an instruction, a protocol, or an encouragement to do anything. Anyone reading it for reasons beyond the imagery should read the safety context at <https://dmtcode.com/prepare> first, which covers risk, contraindications, and setting.
